

PREPARED FOR

Andre Waits · VP Global Card Operations, JPMC · Following our September 2025 conversation

You asked three things in September. The system has now answered all three —  
on a live institution, under a real deadline.

*This is not a progress update. This is the demonstration you asked for.*

YOUR THREE REQUIREMENTS — SEPTEMBER 2025

01

✓ REAL DATA INGESTION

The system ingests actual institutional data — audited financials, custodian statements, appraisal reports, student information systems — not mock data.

02

✓ DIFFERENTIATED OUTPUTS  
BY AUDIENCE

Board summary, technical analysis, regulator-ready pack, and document submission package — generated from the same underlying data, simultaneously.

03

✓ FEEL THE SYSTEM FROM  
ALL ANGLES

CRA heat map with real FFIEC/HMDA/ACS data, showing underserved areas and a route to close gaps — ready to demonstrate live at our next meeting.

WHAT IT JUST PROVED

Turner Theological Seminary

SACSCOC Candidacy Accreditation · Seven-day deadline · April 2026

- REQ 1

Audited financial statements, AssetMark and Cabot Lodge custodian statements, CBRE appraisal (File No. CB24USo68658-1), and Populi student records — all ingested and synthesized in a single session.
- REQ 2

Composite Financial Index narrative (regulator), endowment fund exhibit (board/lender), physical resources section (technical), and a 38-item compliance checklist (operational) — four audience-specific outputs

DIFFERENTIATED OUTPUTS — SAME  
INSTITUTION, SAME DATA

| BOARD OUTPUT                                                                                                                                                            | REGULATOR OUTPUT                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CFI trend analysis, net asset trajectory, forward enrollment growth, LOC retirement plan — framed for strategic governance decision-making.                             | CFI score disclosed with sourced drivers. LOC classification addressed transparently. Endowment exhibit with all four required data elements. Question-by-question format. |
| TECHNICAL OUTPUT                                                                                                                                                        | OPERATIONAL OUTPUT                                                                                                                                                         |
| Property sourced to CBRE appraisal (deed reference, parcel number, appraised value). Investment data traced to custodian accounts by statement date and account number. | 38-item checklist — status coded, owner-assigned, prioritized, with exhibit numbering and confirmation flags for institutional leadership review.                          |
| CRA HEAT MAP — READY TO DEMONSTRATE                                                                                                                                     |                                                                                                                                                                            |
| Georgia + Atlanta MSA. Real FFIEC/HMDA loan-level data. ACS community demographics. Distressed and underserved tract flags. Institution-level CRA                       |                                                                                                                                                                            |

Requirement  
3

(operational) — four audience-specific outputs from one data source.

**REQ 3** CRA heat map pipeline is built and data-ready. FFIEC Census Flat Files, HMDA loan-level data, FDIC Summary of Deposits, and Census ACS loaded into PostgreSQL. Georgia + Atlanta MSA. Demo is available at our next meeting.

*This is a 130-year-old seminary with a live SACSCOC onsite visit in seven days. Their compliance team had weeks of work ahead of them. This was one session. The compliance cascade worked.*

unobserved data lags; institution-level CRA performance overlay. Route to close identified gaps — to be demonstrated live at our next meeting.

Data sources: FFIEC Census Flat Files · CFPB HMDA · FDIC Summary of Deposits · Census ACS API · CDFI Fund Awards

*You have institutions ready to prototype. So do we.*
