WHAT MERIDIA DOES

Meridia translates institutional financial data into governed intelligence — producing differentiated, audience-ready outputs for boards, regulators, families, and lenders.

Not a report generator. Not a dashboard. A governed intelligence layer that reads an institution the way a trusted advisor would — and produces the right output for each audience, simultaneously.

WHAT IT JUST DID

Turner Theological Seminary

SACSCOC Candidacy Accreditation · April 2026

- Complete Section 13 response — 7 financial questions, 9 document questions, 12 physical resource questions answered in full, each prefaced with the original SACSCOC language
- Composite Financial Index analysis across three fiscal years — with direct, sourced disclosure of the FY2025 score and a named explanation of each driver
- 12-quarter endowment fund exhibit sourced to

WHY IT MATTERS TO YOU

Community Development Lending & Investment

Institutional Readability

Translating complex financial condition into defensible, audience-specific language — for the institution, for the funder, for the examiner. The same underlying data reads differently to each audience. Meridia produces all versions simultaneously.

Differentiated Outputs

Board summary, regulator pack, technical analysis, family-facing view — generated from a single data source without manual reformatting. Every output reflects the same institutional truth, translated to its audience's frame.

CRA-Aligned Intelligence

Underserved market identification, institutional

financial health assessment, and gap analysis — the analytical infrastructure that sits behind responsible capital deployment decisions in your district.

WHAT A CONVERSATION WOULD EXPLORE

- How the intelligence layer integrates with institutions you currently fund or are evaluating across GA, FL, SC, and NC
- What differentiated outputs look like against a real

actual custodian statements (AssetMark & Cabot Lodge) — all four SACSCOC-required data elements included

- Physical resources section sourced to a CBRE appraisal report — floor-by-floor layout, full unit mix table, appraised value, deed reference, parcel number
- Enrollment data compiled from Populi, formatted to SACSCOC standards with historical actuals and projections through FY2028–29
- 38-item supplemental checklist with status codes, owner assignments, priority levels, and exhibit numbering for every document required

Their team could not have produced this in three weeks without a consulting firm. This was one session.

institution in your portfolio — live, not a demo

- The bilateral model: reading institutions for lenders AND reading lenders for institutions — simultaneously
- Partnership and pilot framework for the East District

*The system is live. The output is real. **Fifteen minutes.***
