WayPoint

Financial Intelligence Infrastructure

Aliman Neal

Founder & Architect
Atlanta, GA

Financial data exists. Financial intelligence doesn't.

Small Institutions

Seminaries, HBCUs, churches, and nonprofits run on QuickBooks reports no one fully understands. Boards receive spreadsheets, not strategy.

Underserved Households

24.5 million unbanked and underbanked households have no access to the positioning tools that drive informed financial decisions.

Excluded Populations

ChexSystems-flagged, formerly incarcerated, and industry-penalized workers are locked out entirely — served by predatory products or nothing at all.

One data source. Governed outputs for every audience.

WayPoint is an AI-powered financial intelligence platform that ingests institutional financial data and produces governed, audience-differentiated outputs — board-ready summaries, operational dashboards, compliance reports, and plain-language guidance — from a single source of truth.

Board

Strategic summary,
risk indicators,
recommendations

Operations

Data lineage,
calculation methods,
API health

Compliance

Audit trail,
policy adherence,
regulator-ready packs

Family

Plain-language
position, action items,
guided next steps

Same Data → Governed Routing → Different Outputs

Governance-First Architecture

01

INGEST

Connect financial data sources — QuickBooks, bank feeds, manual uploads. Normalize into unified schema. Detect classification errors automatically.

02

GOVERN

Route data through permission cascades. Apply role-based access. Score financial position across four dimensions. Lock sensitive insights until governance review.

03

DELIVER

Generate audience-specific outputs. Board sees strategy. Operations sees detail. Regulators see compliance. Families see plain language. Every score explained.

Built for every tier of need.

WayPoint Core

INSTITUTIONS & HOUSEHOLDS

Financial positioning, report generation, and governance dashboards for small organizations and families building financial stability.

WayPoint Renaissance

RE-ENTRY & EXCLUDED

Purpose-built for people excluded from traditional banking — ChexSystems flagged, prepaid-only, formerly incarcerated. Dignity-first financial intelligence.

WayPoint Edge

UNDERSERVED VERTICALS

Tailored for industries in permanent penalty boxes — creators, cannabis operators, seasonal trades, gig economy. Banking access meets financial governance.

Underserved institutions and households represent a multi-billion dollar gap.

tools available to them

Not a pitch. A prototype.

Working Frontend Prototype

Full financial positioning console with governance panel, guided tour, entity interaction, and scenario engine

PostgreSQL Database

Running on dedicated NAS infrastructure — 17 tables, 2 views, 6,030 education standards loaded with full hierarchy

Data Pipeline

Extraction, transformation, and loading toolkit built and tested against Georgia CASE API for education standards

Architecture Documentation

Complete system specification including API schemas, entity models, product tier definitions, and governance cascades

Institutional Validation

Enterprise Architect at Genuine Parts and VP Global Card Operations at JPMC validating architecture and use case

BUSINESS MODEL

SaaS revenue with tiered pricing by institution size and complexity.

Product Tier	Price Point	Target Market
Core — Small Institution	\$2,000 / year	Churches, nonprofits, seminaries
Core — Household	\$25 / month	Families building financial stability
Renaissance	\$15 / month	Re-entry and excluded populations
Edge — Vertical	\$3,600 / year	Cannabis, creator, gig economy operators

GO - TO - MARKET

Launch with institutional pilot at theological seminary (live environment). Scale through AME church network (5,000+ congregations), HBCU alumni associations, and Alpha Phi Alpha fraternal network. Each institution becomes a case study for the next.

FOUNDER

Aliman Neal

Founder & Architect

Enterprise systems architect and financial operations professional with 15+ years implementing and managing ERP platforms across institutional environments.

Currently manages financial operations at a theological seminary — the same institution serving as WayPoint's first pilot. He sees the problem every day because he lives inside it.

The system wasn't designed from a whiteboard. It was designed from a balance sheet that nobody could read, a board that couldn't get straight answers, and a Controller whose posting errors take longer to fix than to make.
