

Sentiarch – Appendix D

WayPoint FPS & Product Tiers (Core/Edge/Crown)

Version 3.0

Appendix D – WayPoint FPS & Product Tiers (Core / Edge / Crown)

(PRD-style, ready to hand to builders)

D.0 Purpose & Scope

WayPoint is the **experience layer** of Sentiarch in financial life: a **Financial Positioning System (FPS)** that sits on top of regulated banking rails. This appendix specifies:

- product definition for **WayPoint Core, Edge, and Crown**
- who each tier is for
- core capabilities and constraints per tier
- data + integration assumptions
- basic success metrics and MVP scope

This is **not** a full technical architecture doc (see Appendix C), but a **product requirements document** that tells designers, engineers, and partners what the tiers must do.

D.1 Personas & Segments

We anchor the tiers on a few concrete personas:

1. **Household / Individual (Core)**
 - Needs: get out of paycheck-to-paycheck, understand cashflow, pay down debt, start building for kids / retirement.
 - Pain: confusion, shame, random denials, feeling like “no one ever explained the rules.”
2. **Small Business / Solo Founder (Core → Edge)**
 - Needs: stable runway, tax set-asides, hiring and growth decisions, readiness for credit or funding.
 - Pain: 3–5 bank accounts scattered, no reliable cashflow forecast, lenders saying no with poor explanations.
3. **Edge Vertical Operator (Edge)**
 - Examples: creator with multi-platform income, cannabis operator, OnlyFans / adult creator, high-chargeback verticals, heavily seasonal trades.
 - Needs: someone who actually understands their vertical, tools to stay “in the safe lane” with capital providers.

- Pain: deplatforming, blanket risk labels, premium pricing with no transparency.
 - 4. **Family Office / UHNW Principal (Crown)**
 - Needs: entity-aware banking, trust-aware flows, “what happens if...” simulations, onboarding of heirs via Graduation Project / FO-OS.
 - Pain: fragmentation, 15 logins, reports that no one under 50 can understand, heirs disengaged or overwhelmed.
 - 5. **Institutional Partner (All Tiers, External)**
 - Needs: differentiated product without ripping out core systems; access to new segments; visibility into risk and opportunity.
 - Pain: innovation theater, black-box fintechs, regulators skeptical of opaque partnerships.
-

D.2 Tier Definitions

D.2.1 WayPoint Core – Everyday Sophistication

Target users

- Households
- Individuals with mixed W2 / 1099 income
- Small businesses up to a defined complexity threshold (e.g., < \$5M revenue, simple entity stack)

Core promise

“We locate your financial position, show you the routes to your destinations, and recalculate with you as life changes.”

MVP capabilities

1. **Multi-account structure (Profit First / envelope-style)**
 - Support sub-accounts: Income, Operating, Taxes, Reserves, Goals (labels configurable).
 - Automated rules to sweep / allocate inflows across buckets.
 - Baseline templates by archetype (Household, Freelancer, Small Biz).
2. **FPS View (Live Position Map)**
 - Today / Next 30 / Next 90 view of:
 - bills / obligations,
 - cash runway,
 - tax reserve sufficiency,

- progress toward 1–3 goals.
- Simple, narrative view: “You are here; these things are safe, these are tight.”
- 3. **Basic Route Recommendations**
 - Example: “If you raise your monthly debt payment by \$X, here is the time savings and cash impact.”
 - Example: “If you allocate Y% of inflows to emergency fund, here’s when you hit 3 months of expenses.”
 - Always framed as **options**, not commands.
- 4. **Institutional Readiness / “Funding GPS” Snapshot**
 - A simple readiness card: e.g., “Mortgage-ready in ~6 months if trend continues” or “Business credit-ready: green on revenue, amber on utilization.”
 - Exportable / shareable with advisors (PDF or secure link).
- 5. **Gentle Education Layer**
 - Micro-explanations inline: “Why we recommend this route” in natural language.
 - Optional beginner / intermediate modes (less vs more detail).

Constraints / Guardrails

- No direct lending decisions in-app; recommendations are “preparation” focused.
- Language must be trauma-informed and non-shaming.
- Full human override for any automated plan via advisor / support.

D.2.2 WayPoint Edge – Complex & Underserved Verticals

Target users

- Creators (multi-platform income)
- Cannabis operators (where legal)
- Adult creators / high-risk verticals
- Highly seasonal or cyclic businesses

Core promise

“We help you operate in a tough vertical with transparency and discipline so that capital providers can actually see the real story.”

MVP extensions beyond Core

1. Vertical-Aware Cashflow & Seasonality Models

- Configurable seasonality curves for each vertical.
- Ability to tag inflows/expenses by platform / channel (e.g., “OnlyFans”, “Twitch”, “Dispensary #1”).
- Visuals showing “normal volatility vs worry volatility.”
- 2. **Risk-Signal Panel (Explained to Both Sides)**
 - For users: “Here’s how capital providers typically view your vertical; here’s where you’re above/below their comfort.”
 - For institutions: “This portfolio behaves like this; here’s how this client compares to peers.”
- 3. **Edge Behavior Playbook**
 - Concrete behaviors that keep them inside a green band: e.g., minimum reserve ratios, diversification targets, chargeback thresholds.
 - FPS routes anchored in those behaviors.
- 4. **Edge Sandbox Integration Hooks (for Institutions)**
 - Toggle for partner institutions to enroll certain customers into WayPoint Edge pilot.
 - Reporting pack of anonymized, aggregated metrics at portfolio level (tying into Appendix F & E).
- 5. **Stigma-Aware UX**
 - Explicit commitment to dignity in language and design.
 - Clear privacy and data-use statements tailored to sensitive verticals.

Constraints / Guardrails

- Edge tier must **never** quietly promise regulatory arbitrage.
- Vertical-specific modeling must be documented and explainable.
- Clear opt-in for sharing data with institutions; default is **user control**.

D.2.3 WayPoint Crown – Bridge to Eden Crown & Family Office

Target users

- Family offices
- UHNW principals
- Complex families with multi-entity stacks and trusts

Core promise

“A banking and positioning experience that understands entities, trusts, and stewardship—not just accounts.”

MVP capabilities

1. **Entity-Aware Banking View**
 - Accounts grouped by entity and trust, not just by “owner name.”
 - Visual map: which entities feed others, how cash and risk travel through the system.
 - Linkage to FO-OS entity profiles (purpose, mandate, beneficiaries).
2. **Trust-Aware Cash & Distribution View**
 - For each trust:
 - corpus,
 - distribution policies,
 - recent distribution patterns,
 - Trust Index health (from Appendix A).
 - “If-then” scenarios: e.g., “If we raise this distribution by X for the next 3 years...”
3. **Stewardship Views for Heirs (Graduation Project tie-in)**
 - Per-heir cockpit: “Here is your slice of the system; here are your current responsibilities; here are live metrics you influence.”
 - Seamless handoff to Crowns Eye modules and EnvoyOS campaigns.
4. **Family Office & Advisor Tools**
 - Multi-role access (CIO, trustee, accountant, counsel).
 - Ability to generate council-ready packets: stress tests, scenario runs, Trust Index changes.
5. **WayPoint Crown ↔ WayPoint Core Bridges**
 - For heirs and operating businesses connected to the family: ability to see how their Core-level behavior feeds into Crown-level outcomes.

Constraints / Guardrails

- Crown is **not** marketed to general public; invitation / vetting basis via FO networks.
 - Governance around data segregation is strict: “need-to-know” views per role.
-

D.3 Shared Core Capabilities Across Tiers

Regardless of tier, WayPoint must have:

1. **FPS Engine**
 - Input: normalized transaction streams, balances, obligations, goals.
 - Output: current position, near-term projections, route options.
2. **Scenario Engine**
 - Support for simple, user-driven “What if...?” scenarios.

- Logging scenario runs to improve future recommendations.
 - 3. **Signals & Explanations**
 - Key signals (stability, liquidity, risk exposure, progress to goals).
 - Plain-language explanation attached to every signal.
 - 4. **Multi-Institution Data Aggregation**
 - Plaid-style flows for personal / small business.
 - FO-OS integrations / file-based loads for family offices.
 - Clear handling of missing or partial data.
 - 5. **Human-in-the-Loop Options**
 - Ability to “escalate” to human advisor (internal or external) at any point.
 - Advisor workbench view powered by the same underlying FPS.
-

D.4 Integrations & Data Requirements (MVP)

Banking / BaaS

- At least one BaaS partner (for deposits, cards, ACH) for Core & Edge.
- For early Crown, read-only integrations with FO custodians and trust banks.

Data Aggregation

- Plaid / similar aggregator for mainstream accounts.
- Upload flows (CSV/PDF) for “long tail” accounts in early pilots.

Identity & Risk

- KYC / KYB provider integration for onboarding.
- Optional integration with consumer/business credit bureaus **for interpretation only**, not for instant denial logic.

Analytics & Logging

- Central telemetry for:
 - FPS calculations,
 - scenario usage,
 - recommendation acceptance rates,
 - errors / fallbacks.
-

D.5 Non-Functional Requirements

1. **Security & Privacy**
 - End-to-end encryption in transit, encryption at rest.
 - Data minimization: only collect what is necessary for FPS and product features.
 - Clear data retention / deletion policies (especially for Edge verticals).
 2. **Explainability**
 - Every route recommendation must have a “Show me why” explanation in plain language.
 - Institutions get model cards for signals used in any sandbox.
 3. **Performance & Experience**
 - FPS view must load within X seconds (e.g., <2s) on typical data volumes.
 - Scenario recalculations must feel interactive (<1–3s for most cases).
 4. **Regulatory Posture**
 - No product flow should require WayPoint entities to hold deposits or originate credit as “the bank of record.”
 - All flows documented so partner banks can map them to existing compliance regimes.
-

D.6 MVP vs. Future Enhancements

In-scope for MVP

- WayPoint Core: multi-account banking + basic FPS + route suggestions + simple readiness report.
- Early Edge: at least **one vertical** (e.g., creator economy) with basic vertical-aware views.
- Crown (Phase 0): read-only FO view wired to FO-OS pilot, with at least one Graduation Project tie-in.
- Advisor / partner institution view to see FPS outputs for pilot cohorts.

Out-of-scope for MVP (but scheduled in roadmap)

- Full Edge catalog (cannabis, adult, etc. at scale).
 - Complex securitization flows (that’s Appendix H + later phases).
 - Manus wearable layer & tokenized access (Appendix L).
 - Full-blown Education OS, Music APS, Automotive, etc. (Appendix N).
-

D.7 Success Criteria (Early Phases)

For Individuals / Households

- X% of pilot users can accurately explain their financial position after 30 days (self-report + quiz).
- Measurable increase in emergency fund balances / reduction in overdrafts after 90 days.

For Small Businesses

- Improvement in runway visibility (e.g., % who can see >60 days ahead).
- Uptick in successful funding attempts compared to baseline.

For Edge Verticals

- Demonstrably lower involuntary closures / terminations among Edge pilot participants vs control.
- Positive feedback from at least one institutional partner: “We understand this portfolio better” (qualitative & quantitative).

For Family Offices

- FO reports improved clarity on entity/trust relationships.
 - At least one heir completes a Graduation Project with WayPoint Crown support.
-
